

मुख्यालय राष्ट्रीय सुरक्षा गारद (संभरण शाखा : ऑर्डनेंस अनुभाग) हैण्ड हेल्ड एक्सप्लोसिव डिटेक्टर <u>के गुणात्मक आवश्यकता (क्यूआर) और परीक्षण निर्देशों (टीडी)</u> <u>के मसौदे को गृह मंत्रालय की वेबसाइट पर डालना</u>

 कृपया गृह मंत्रालय, पीएम डिविजन के पत्र सं. IV-24011/12/2011-Prov.l दिनांक 05 अक्तूबर 2016, पत्र सं. IV-24011/12/2011-Prov.l दिनांक 13 जून, 2012 और पत्र सं. 11012/02/2009-Fin-I/Prov-l-17 दिनांक 02 जनवरी, 2018 का संदर्भ लें।

2. हैण्ड हेल्ड एक्सप्लोसिव डिटेक्टर के गुणात्मक आवश्यकता (क्यूआर) और परीक्षण निर्देशों (टीडी) में संशोधन के लिए तकनीकी विशेषज्ञों के उप समूह की बैठक मुख्यालय राष्ट्रीय सुरक्षा गारद में दिनांक 15 जून 2023 को 1100 बजे आयोजित हुई।

3. बैठक के दौरान उप समूह ने कहा कि विक्रेताओं की टिप्पणियों/सुझावों को आमंत्रित करने के लिए हैण्ड हेल्ड एक्सप्लोसिव डिटेक्टर के गुणात्मक आवश्यकता (क्यूआर) और परीक्षण निर्देशों (टीडी) के मसौदे को 15 दिनों के लिए राष्ट्रीय सुरक्षा गारद के साथ-साथ गृह मंत्रालय की वेबसाइट पर डाला जाए।

4. पीएम डिवीजन के उपर्युक्त संदर्भित पत्रों के अनुसार हैण्ड हेल्ड एक्सप्लोसिव डिटेक्टर के गुणात्मक आवश्यकता (क्यूआर) और परीक्षण निर्देशों (टीडी) का मसौदा संलग्न परिशिष्ट के अनुसार गृह मंत्रालय की वेबसाइट पर डालने हेतु प्रिटेंड कॉपी तथा सॉफ्ट कॉपी में भेजा जा रहा है।

106/2023

<u>अनुमाग अधिकारी, रूम न0–10, (IT Cell), एनआईसी, नार्थ ब्लॉक, नई दिल्ली</u> soit@nic.in पी/604/20/389/HHED/संभरण(ऑर्डनेंस)/एनएसजी/ / ८/ 31 दिनांक : 2¹ जून 2023

हैण्ड हेल्ड एक्सप्लोसिव डिटेक्टर के गुणात्मक आवश्यकता (क्यूआर)/ परीक्षण निर्देशों (टीडी) के मसौदे पर विक्रेताओं की टिप्पणियों का आमंत्रण

1. आपको सूचित किया जाता है कि हैण्ड हेल्ड एक्सप्लोसिव डिटेक्टर के गुणात्मक आवश्यकता (क्यूआर) और परीक्षण निर्देशों (टीडी) के मसौदे पर फर्मों/विक्रेताओं की टिप्पणियां आमंत्रित है। सभी फर्मों से निवेदन है कि नीचे दिए गए प्रारूप में वे अपनी टिप्पणियां भरकर ई-मेल पता scord@nsg.gov.in या gcproc@nsg.gov.in पर भेजें।

गुणात्मक आवश्यकता (क्यूआर)	परीक्षण निर्देश (टीडी)	फर्म द्वारा टिप्पणियां	
----------------------------	------------------------	------------------------	--

2. आपसे अनुरोध है कि वेबसाइट पर प्रदर्शित होने की तारीख से 15 दिनों के भीतर अपनी टिप्पणियां भेजें। उप समूह कमेटी की बैठक में उपर्युक्त उपकरण/हथियार के गुणात्मक आवश्यकताओं/परीक्षण निर्देशों को अंतिम रूप देने पर विचार किया जा रहा है।

106/2023 (पी०सी० शर्मा)

दिनांक : 21 जून 2023

DRAFT QUALITATIVE REQUIREMENT (QR) AND TRIAL DIRECTIVE (TD) OF HAND HELD EXPLOSIVE DETECTOR (HHED) : 15 JUNE 2023

S No	Parameter	Qualitative Requirement	Trial Directive
1.	General	The said Explosive Detector shall be used to detect and identify group of explosives (bulk and trace quantities) in Anti Sabotage operations, Render Safe Procedure Operations (in terms of UXOs, IEDs, Home Made Explosives, etc) and Post Blast Investigations, in addition to other operations related to Bomb Disposal and Explosives	-
2.	Detection Technology	Ion Mobility Spectrometry (IMS) or Amplifying Fluorescent Polymer (AFP) or Mass Spectrometry (MS) or Micro Sensor or Gas Chromatography or Chemilumine scence or Thermo Redox or Metal oxide sensor or High Frequency Quartz Crystal microbalance or any equivalent/better technology	OEM to furnish certificate stating the type of technology used for detection – BOO to check the same
3.	Detection Capability	(a) The detector should be able to identify group of explosive or explosive precursors as listed in Annex A. The detector should be able to detect all types of organic and inorganic explosives in vapour, liquid, solid/powder, particle and mixture forms. The detector should be able to detect both the positive and negative ion groups of the explosives.	(i) BOO to test by keeping TNT, Nitro methane (in liquid form), RDX, PETN and Ammonium Nitrate (one explosive at a time) - all tested in both particle and vapour mode. For positive polarity explosive (such as TATP/HMTD) undertaking for detection to be provided by the OEM.
			(ii) Note: This test is purely for testing if the detector is able to detect these explosives and correctly identify them. It is not a test for the minimum threshold quantity of detection. Hence sufficiently high vapour/ particles are to be tested, as desired by vendors during testing.
		(b) The detector should have an open library to add new explosives/ explosive precursors	

B.K.1

Dun

Aleusar

S No	Param eter	Qualitative Requirement	Trial Directive
4.	Sampl e collect ion	The detector should allow Sample collection in both:	Physically check by the BOO.
	Ion (a) Vapour mode by collection of explosive vapour in Group of explosive The below test is to be conducted for TNT, PET Hence a total of 5 tests are to be conducted :- (i) In a clean glass container (with volume of cor container being 1cm to 10 cm diameter, place a lid of the glass container. (ii) Place the container in the temperature of 20 (iii) Open the lid of the container. Within 1 min placed at a distance less than 5cm without touc 20 seconds or less for collection, analysis & detector is to be received.		 The below test is to be conducted for TNT, PETN, RDX, Ammonium Nitrate and Nitro Methane. Hence a total of 5 tests are to be conducted :- (i) In a clean glass container (with volume of container between 100mL to 500 mL) with mouth of container being 1cm to 10 cm diameter, place at-least 10 g of Explosive (eg. TNT) and close the lid of the glass container. (ii) Place the container in the temperature of 20°C to 30°C and wait for 8 hours. (iii) Open the lid of the container. Within 1 min from the opening of the lid, the ETD should be placed at a distance less than 5cm without touching the mouth of the container for a duration of 20 seconds or less for collection, analysis & detection of sample from the suspected object. (iv) The result shown in the detector is to be recorded.
		(b) Particle mode by detecting trace quantities of explosives (by using swabs)	 (v) Separate containers to be catered for participating vendors. (i) Use a swab and touch over the explosives/ precursors – TNT, PETN, RDX, Ammonium Nitrate and Nitro Methane – one swab per explosive/ precursor. (ii) Test for each of the explosive
5.	Auto Calibr ation	(a) Adjust/Resetting for further operation should be only automatic.(b) Time for auto calibration should not exceed 30 seconds.	Physically checked by BOO

B.K. Mg

me

0

S	Parameter	Qualitative Requirement	Trial Directive	
6.	Consumable	Consumables for swab should be	BOO to physically check the following:	
	S	without any specific dependence on the firm.	(a) Non dependence (on OEM/ vendor) nature of swab	
		Qty of swab (with a life of 5 years) to be provided along with each equipment to	(b) OEM undertaking for providing each swab for Rs. 5 or less for a period of 05 years .	
		be specified by the user at the tender stage.	(c) 10,000 numbers of swabs provided during initial supply	
7.	Operation Temperature	(a) The offered Explosive Detector shall operate and detect in the Temperature range of -10°C to 55°C (<u>+</u> 3°C).	BOO to check the lab certificate	
	3	(b) The explosive detector shall be capable of being stored in the temperature range of -20°C to 60°C. OEM to furnish test certificate from a national/international accredited lab		
8.	Relative humidity	The offered ETD shall operate in Relative humidity of upto 95%. OEM/ Firm to provide a test certificate from a national/ international accredited lab.	BOO to check the lab certificate	
9.	False Detection/ False Alarms	The offered ETD shall have a false alarm rate of less than 3%.	Explosive and non-explosive placebos are to be placed inside identical containers (without lid so as to allow sufficient vapours) separately. The containers are to be numbered on the bottom side (which is not visible during the test). These containers are to be checked with the detector. A minimum of 35 containers are to be used for this test – 33 with placebos and 2 with explosives (1 with TNT, 1 with RDX). The detector should :-	
			(i) Correctly detect and identify the explosives- No error in detection or wrong identification of explosive shall be acceptable	
			(ii) Not identify more than 1 of the placebos as explosives - Upto 1 error in wrong identification of placebo as explosive shall be acceptable	
			Note: Placebos should not have any chemical resemblance to RDX/ TNT and care should be take so that the placebos should not contain traces of these or any explosives. Suggested Placebos include Chalk powder, moulding clay, common salt, stc	
	B.K.	huge Im	Jung 200 Alereser	
	Apol	Sug	the	

.

•

•

S	Parameter	Qualitative Requirement	Trial Directive
10.	Detection range	 (a) The Explosive Detector shall detect the presence of small quantities of explosive by analysing the explosive vapour or trace available in the container, bag, etc. as well as outside in open in bulk quantities. The detector shall detect and identify the explosive groups. The OEM to provide datasheet / Certificate for the threshold of detection for vapour and trace modes. 	BOO to check the datasheet and certificate for the threshold of detection for both Vapor and Trace modes
		(b) Threshold for detecting low-volatile organic substances :	-
		(i) Trace Mode –minimum of 0.5x10 ⁻⁹ g for 2,4,6-trinitrotoluene (TNT)	 Trace Mode. Firm to submit National (NABL accredited) lab certificates tested in accordance with ASTM E2677-20/ASTM E2520-21 (or latest versions of E2677/E2520 Standards) specifically mentioning the threshold/sensitivity of detection. In case of absence of ASTM E2520/ASTM E2677 compliant Lab Certificates, following procedure will be adopted :- (i) Take Three glass bottles with one litre of acetone each. (ii) In 1st bottle, add 1 g to 1.5g of TNT and thoroughly shake such that the complete TNT is dissolved. (iii) After previous step, take 0.8 to 1 mL of acetone (mixed with TNT) from 1st bottle and add to 2nd glass bottle. Shake such that the solution is thoroughly mixed. (iv) After previous step, take 0.8 to 1 mL of acetone (mixed with TNT) from 2ndbottle and add to 3rd glass bottle. Shake such that the solution is thoroughly mixed. (v) After previous step, take 0.8 to 1 mL of the solution from 3rd glass bottle and apply on the trace paper. Let the acetone evaporate and then proceed for next step. (vi) Use one trace paper(with trace TNT) and one empty trace paper (without trace TNT) for tests in the explosive detector.
			The detector should indicate the presence of TNT in each of the swab/ trace paper with TNT and should NOT indicate in the empty trace paper.
1	3.K. Mu	to the la	unt an Saush

S No	Parameter	Qualitative Requirement	Trial Directive	
10.		Vapour mode: capable of testing RDX at saturation vapour pressure (as in TD) at 20°C to 25° Celsius.	 The below test is to be conducted for RDX since RDX has a low explosive partial vapour pressure. (i) In a clean glass container (with volume of container between 100mL to 500 mL) with mouth of container being 1cm to 10 cm diameter, place atleast 10 g of RDX and close the lid of the glass container. (ii) Place the container in the temperature of 20°C to 30°C and wait for 6 hour. (iii) Open the lid of the container. Within 1 min from the opening of the lid, the ETD should be placed at a distance of 5cm or less from the mouth of the container for a duration of 5 seconds or less from the suspected object (vapour collection time of 5 seconds (5+15)). 	
		Note : The reference explosives are taken for standardization of detection, since different explosives have different explosive partial vapour pressures	The result shown in the detector is to be recorded	
11.	Operational weight	QR: (a) Operational weight (with battery for operation): Option 1: Weight of offered explosive detector to be less than 2 kg. Option 2: Weight of offered explosive detector to be less than 4 kg. (Option to be specified at the time of tender) (b) The total weight of the equipment including accessories in packed	BOO to weigh and check the parameter	
	s.K.llung	condition is to be less than 10 kg.	W Aan	

S No	Parameter	Qualitative Requirement	Trial Directive
12.	Safety – Ionisation Source	 (a) The explosive detector should be with or without radioactive material. (b) In case of equipment with radioactive material, the firm has to provide safe handling certificate from AERB. (c) After completion of shelf life followed by codal formalities of condemnation procedure of the equipment. It is firm's responsibility to dispose of eqpt as per regulations of AERB. The undertaking certificate regarding the same may be obtained by both the firm & OEM 	BOO to check the undertaking and Test Certificate
13.	Initial Warm up time	Initial Warm up time should be less than 180 seconds	BOO to check by switching on the detector and noting the time the detector is ready – immediately after the detector being ready, it should be checked by detection of a bulk explosive such as a slab of TNT.
14.	Analysis Time	Time for analysis and detection shall not exceed 20 seconds (including vapour collection time)	BOO to physically check the same.

No			
15.	Power	Battery Charger should operate on AC mains from 100-260V, 50 – 60 Hz. The battery charger to have the voltage rating clearly mentioned on it. The charger should have a short circuit protection for which an OEM letter is to be provided stating that short circuit protection is available.	BOO to check the voltage rating as mentioned on the battery charger and the OEM letter for short circuit protection.
	-	A 12V DC car cigarette charger or a 12 V DC (car cigarette Plug) to 230V adapter for charging the equipment using a car cigarette charger to be provided.	BOO to physically use and check the same.
		Equipment should operate with rechargeable batteries	BOO to physically check the same
		Operational Time. The minimum operational time should be 4 hours.	 (i) Switch on the equipment (with a fullu charged battery) and set the mode to vapour mode and Note the time. (ii) Keep testing the equipment using bulk explosives (eg. TNT slab) every 5 minutes or until the equipment goes into sleep mode, whichever is lesser in time. (iii) The minimum operational time should be 4 hours. Repeat the above procedure for trace mode, using another fully charged battery – Sufficient quantities of particles are to be present on the swab.
15.		OPTION 1 One spare set of batteries to be provided (excluding the main battery). OEM to provide undertaking for the same OPTION 2 Two spare set of batteries to be provided (excluding the main battery). OEM to provide undertaking for the same USER TO SPECIFY THE OPTION	BOO to check the OEM undertaking and physically count the batteries provided
		Full Battery charging time to be maximum of 4 hours. There should be a provision to charge multiple batteries simultaneously (either using a single charger or multiple chargers, in which case multiple chargers to be provided) OPTIONAL One spare charger to be provided	BOO to physically check the same by using fully drained battery/ batteries
		USER TO SPECIFY

	Apel	Com the	

S No	Parameter	Qualitative Requirement	Trial Directive
15.		Reverse polarity protection to be provided (both in charger and in the detector).	BOO the physically try (not forcefully so as to damage the equipment or battery) to charge or insert battery in reverse polarity and check if the equipment has reverse polarity protection.
		Battery warranty shall be inclusive for the instance when the operational time for the battery reduces less than 3 hours.	BOO to check the warranty card provided.
		Firm to provide a separate warranty card for the batteries clearly mentioning the above clause, duly laminated with each equipment supplied, as part of the accessories for the equipment.	
16	Display	 (a) Equipment should have a full coloured LED/ LCD display. The display should be visible during peak hour of sunlight. (b) Equipment should display the following details (either in the coloured display or using a separate LED):- 	Physically check by the user
		 (i) Explosive/ Explosive Precursor or its ingredient (i.e. the generic group is acceptable) (ii) Low battery indication/ Battery level indicator 	
17.	Self Cleaning Time	Not more than 300 seconds	BOO to check the feature and measure the time
18.	Electromagn etic Interference	The equipment should not get affected by any electromagnetic radiation or electronic/ magnetic devices in the surrounding.	BOO to check the NABL/ ILAC accredited lab certificate (complaint to either MIL Std-461/ MIL std – 704/ Mil Std-1265/ MIL std – 1399/ DEF STAN 59/411/ FCC part 15 class A/ FCC part 15 class B/ EN61000-6-1/ EN61000-6-2/ EN61000-6-3/ EN1000- 6-4/IEC61326-1) for the same.
